INDEX TO

EXPERIMENTAL MECHANICS

VOLUME 14, 1974

SUBJECT INDEX

Achromatic Quarterwave Plate, Towards the—Discussion by H. K. Aben, 249-250 (June).
Acoustic Emission and the Portevin–Le Chatelier Effect—W. F. Hartman, 19-23 (Jan.).
Acoustic Emission on Strain Rate in 7075-T6 Aluminum, The Dependence of—M. A. Hamstad and A. K. Mukherjee, 33-41 (Jan.).
Acoustic-emission Techniques, Continuous Monitoring of Fatigue-crack Growth by—D. O. Harris and H. L. Dunegan, 71-82 (Feb.).
Acoustic Emissions of Fatigue-crack Growth, Effect of Loading Variables on the—T. M. Morton, S. Smith and R. M. Harrington, 208-213 (May).
Acoustical Birefringence and the Use of Ultrasonic Waves for Experimental Stress Analysis—N. N. Hsu, 169-176 (May).
Adhesive Fracture of a Lap Shear Joint—K. L. DeVries, M. L. Williams and M. D. Chang, 89-97 (March).
Anisotropic Media by Dynamic Photomechanics, Wave Motion in—R. W. Rowlands, I. M. Daniel and R. Prabhakaran, 433-439 (Nov.).
Application of Birefringent Coatings to Metal Surfaces Which Are to Undergo Large Plastic Strains, The—C. Adams and J. B. Beese, 202-203 (May).
Application of the Diffraction-grating Strain-gage Technique for Measuring Strains and Rotations During Elastic Impact of Rods—William F. Hartman, 509-512 (Dec.).
The Application of Holographic Multiplexing to Record Separate Isopachic- and Isochromatic-fringe Patterns—A. Assa and A. A. Betser, 502-504 (Dec.).
Application of Moiré Grids for Deformation Studies in a Wide Temperature Range—P. Straka and J. T. Pindera, 214-216 (May).
Application of the Vibrating-wire Principle for the Measurement of Strain in Concrete, The—I. W. Hornby and B. E. Noltingk, 123-128 (March).

Biaxial Fracture Stresses for Filled Epoxy Tubes—Richard E. Ely, 492-496 (Dec.).
Bending and Torsion, A Fatigue-testing Machine for Combined—G. S. A. Shawki and A. A. Mashhour, 196-201 (May).
Bending, Inelastic Deformations of Mild-steel Beams Under Symmetrical and Unsymmetrical Cyclic—M. M. Ghamian, S. Krishnasamy and A. N. Sherbourne, 49-56 (Feb.).
Biomechanical Study of the Constitutive Laws of Vascular Walls—K. Hayashi, M. Sato and K. Moritake, 440-444 (Nov.).
Birefringent Coatings to Metal Surfaces Which Are to Undergo Large Plastic Strains, The Application of—C. Adams and J. B. Beese, 202-203 (May).
Bone, Instrumented Tensile-impact Tests of—S. Saha and W. C. Hayes, 473-478 (Dec.).
Brittle-coating-patterns Evaluation—A. J. Durelli, V. J. Parks and V. Pavlin, 323-325 (August).
Buckling of Advanced Composite Curved Panels, Shear—D. J. Wilkins and F. Olson, 326-330 (August).
Buckling, of Integrally Ring-stiffened Cylindrical Shells Under Axial Compression, Further Experimental Studies on—T. Weller and J. Singer, 267-273 (July).
Buckling Strength of Concrete Panels, A Method for Determining the—S. E. Swartz, V. H. Rosebraugh and S. A. Rogacki, 138-144 (April).

Close-field Optical Analysis of an Explosive-loading Function—J. B. Ligon and W. F. Riley, 184-189 (May).
Composite Curve Panels, Shear Buckling of Advanced—D. J. Wilkins and F. Olson, 326-330 (August).
Composite Materials, Determination of Fatigue-related Heat Emission in—K. L. Reifsnider and R. S. Williams, 479-485 (Dec.).
Composites by Ultrasonic Velocity Measurements, Elastic Constants of B-Al—J. H. Gieske and R. E. Allred, 158-165 (April).
Concrete Panels, A Method for Determining the Buckling Strength of—S. E. Swartz, V. H. Rosebraugh and S. A. Rogacki, 138-144 (April).
Concrete, The Application of the Vibrating-wire Principle for the Measurement of Strain in—I. W. Hornby and B. E. Noltingk, 123-128 (March).
Continuous Monitoring of Fatigue-crack Growth by Acoustic-emission Techniques—D. O. Harris and H. L. Dunegan, 71-82 (Feb.).
Crack, Photoelastic Analysis of the Stress Field Surrounding a Fatigue—A. Berkovits, A. A. Betser and A. Assa, 64-68 (Feb.).
Creep-bending Facility and Tests on Large Specimens—R. Henschel, I. Berman and D. H. Pai, 237-243 (June).
Cyclic Bending, Inelastic Deformations of Mild-steel Beams Under Symmetrical and Unsymmetrical—M. M. Ghamian, S. Krishnasamy and A. N. Sherbourne, 49-56 (Feb.).
Cylinders, Strain Distribution Within Compressed Circular—M. Al-Chalabi, F. J. McCormick and C. L. Huang, 497-501 (Dec.).

Deformation and Failure of Spinal Materials—W. F. Hartman, 98-103 (March).
Deformation Studies in a Wide Temperature Range, Application of Moiré Grids for—P. Straka and J. T. Pindera, 214-216 (May).
Design of a Test Rig for Combined Loading of Circular Plates and Shallow Shells, The—H. M. Haydl and A. N. Sherbourne, 166-168 (April).
Determination of Fatigue-related Heat Emission in Composite Materials—K. L. Reifsnider and R. S. Williams, 479-485 (Dec.).
Determination of Mode I Stress-intensity Factors by Holographic Interferometry, The—Discussion by M. E. Fourney, 69-70 (Feb.).
Determination of Stress-intensity Factors from Photoelastic Data with Applications to Surface-flaw Problems—M. A. Schroedl, J. J. McGowan and C. W. Smith, 392-399 (Oct.).
Determination of the Optically Equivalent Model in Three-dimensional Photoelasticity—L. S. Srinath and A. V. S. S. S. R. Sarma, 118-122 (March.)
Development of Capacitance Strain Transducers for High-temperature and Biaxial Applications—L. M. Yeakley and U.S. Lindholm, 331-336 (August).
Diffraction-grating Strain-gage Technique For Measuring Strains and Rotations During Elastic Impact of Rods, Application of the—William F. Hartman, 509-512 (Dec.).
A Dynamic Investigation of Fiber-reinforced Viscoelastic Materials—H. J. Sutherland and H. H. Calvit, 304-310 (August).
Dynamic Yield-strength Determination at Elevated Temperatures After Nanosecond Pulse Heating—J. Lipkin, 177-183 (May).

Edge-effect Studies in Fiber-reinforced Laminates—D. W. Oplinger, B. S. Parker and F. P. Chiang, 347-354 (Sept.).
Effect of Loading Variables on the Acoustic Emissions of Fatigue-crack Growth—T. M. Morton, S. Smith and R. M. Harrington, 208-213 (May).
Effects of Impedance Mismatch on the Strength of Waves in Layered Solids—C. P. Burger and W. F. Riley, 129-137 (April).
Effects of Material and Stacking Sequence on Behavior of Composite Plates with Holes—I. M. Daniel, R. E. Rowlands and J. B. Whiteside, 1-9 (Jan.).
Elastic Constants of B-Al Composites by Ultrasonic Velocity Measurements—J. H. Gieske and R. E. Allred, 158-165 (April).
Elasto-static Response of Thick Shells, Experimental Determination of the—P. G. Glockner and F. G. Bercha, 297-303 (August).
An Electromagnetic, Plane Stress-wave Generator—Discussion by Herbert Becker, 424 (Oct.).
Epoxy Tubes, Biaxial Fracture Stresses for Filled—Richard E. Ely, 492-496 (Dec.).
Experimental Determination of the Elasto-static Response of Thick Shells—P. G. Glockner and F. G. Bercha, 297-303 (August).
An Experimental Study of the Parametric Excitation of a Tensioned Sheet with a Cracklike Opening—R. L. Carlson, 452-458 (Nov.).

SOCIETY FOR EXPERIMENTAL STRESS ANALYSIS. 21 BRIDGE SQUARE – P.O. BOX 277, SAUGATUCK STA., WESTPORT, CT 06880

INDEX TO

EXPERIMENTAL MECHANICS

VOLUME 14, 1974

SUBJECT INDEX

Achromatic Quarterwave Plate, Towards the—Discussion by H. K. Aben, 249-250 (June).
Acoustic Emission and the Portevin–Le Chatelier Effect—W. F. Hartman, 19-23 (Jan.).
Acoustic Emission on Strain Rate in 7075-T6 Aluminum, The Dependence of—M. A. Hamstad and A. K. Mukherjee, 33-41 (Jan.).
Acoustic-emission Techniques, Continuous Monitoring of Fatigue-crack Growth by—D. O. Harris and H. L. Dunegan, 71-82 (Feb.).
Acoustic Emissions of Fatigue-crack Growth, Effect of Loading Variables on the—T. M. Morton, S. Smith and R. M. Harrington, 208-213 (May).
Acoustical Birefringence and the Use of Ultrasonic Waves for Experimental Stress Analysis—N. N. Hsu, 169-176 (May).
Adhesive Fracture of a Lap Shear Joint—K. L. DeVries, M. L. Williams and M. D. Chang, 89-97 (March).
Anisotropic Media by Dynamic Photomechanics, Wave Motion in—R. W. Rowlands, I. M. Daniel and R. Prabhakaran, 433-439 (Nov.).
Application of Birefringent Coatings to Metal Surfaces Which Are to Undergo Large Plastic Strains, The—C. Adams and J. B. Beese, 202-203 (May).
Application of the Diffraction-grating Strain-gage Technique for Measuring Strains and Rotations During Elastic Impact of Rods—William F. Hartman, 509-512 (Dec.).
The Application of Holographic Multiplexing to Record Separate Isopachic- and Isochromatic-fringe Patterns—A. Assa and A. A. Betser, 502-504 (Dec.).
Application of Moiré Grids for Deformation Studies in a Wide Temperature Range—P. Straka and J. T. Pindera, 214-216 (May).
Application of the Vibrating-wire Principle for the Measurement of Strain in Concrete, The—I. W. Hornby and B. E. Noltingk, 123-128 (March).

Biaxial Fracture Stresses for Filled Epoxy Tubes—Richard E. Ely, 492-496 (Dec.).
Bending and Torsion, A Fatigue-testing Machine for Combined—G. S. A. Shawki and A. A. Mashhour, 196-201 (May).
Bending, Inelastic Deformations of Mild-steel Beams Under Symmetrical and Unsymmetrical Cyclic—M. M. Ghamian, S. Krishnasamy and A. N. Sherbourne, 49-56 (Feb.).
Biomechanical Study of the Constitutive Laws of Vascular Walls—K. Hayashi, M. Sato and K. Moritake, 440-444 (Nov.).
Birefringent Coatings to Metal Surfaces Which Are to Undergo Large Plastic Strains, The Application of—C. Adams and J. B. Beese, 202-203 (May).
Bone, Instrumented Tensile-impact Tests of—S. Saha and W. C. Hayes, 473-478 (Dec.).
Brittle-coating-patterns Evaluation—A. J. Durelli, V. J. Parks and V. Pavlin, 323-325 (August).
Buckling of Advanced Composite Curved Panels, Shear—D. J. Wilkins and F. Olson, 326-330 (August).
Buckling, of Integrally Ring-stiffened Cylindrical Shells Under Axial Compression, Further Experimental Studies on—T. Weller and J. Singer, 267-273 (July).
Buckling Strength of Concrete Panels, A Method for Determining the—S. E. Swartz, V. H. Rosebraugh and S. A. Rogacki, 138-144 (April).

Close-field Optical Analysis of an Explosive-loading Function—J. B. Ligon and W. F. Riley, 184-189 (May).
Composite Curve Panels, Shear Buckling of Advanced—D. J. Wilkins and F. Olson, 326-330 (August).
Composite Materials, Determination of Fatigue-related Heat Emission in—K. L. Reifsnider and R. S. Williams, 479-485 (Dec.).
Composites by Ultrasonic Velocity Measurements, Elastic Constants of B-Al—J. H. Gieske and R. E. Allred, 158-165 (April).
Concrete Panels, A Method for Determining the Buckling Strength of—S. E. Swartz, V. H. Rosebraugh and S. A. Rogacki, 138-144 (April).
Concrete, The Application of the Vibrating-wire Principle for the Measurement of Strain in—I. W. Hornby and B. E. Noltingk, 123-128 (March).
Continuous Monitoring of Fatigue-crack Growth by Acoustic-emission Techniques—D. O. Harris and H. L. Dunegan, 71-82 (Feb.).
Crack, Photoelastic Analysis of the Stress Field Surrounding a Fatigue—A. Berkovits, A. A. Betser and A. Assa, 64-68 (Feb.).
Creep-bending Facility and Tests on Large Specimens—R. Henschel, I. Berman and D. H. Pai, 237-243 (June).
Cyclic Bending, Inelastic Deformations of Mild-steel Beams Under Symmetrical and Unsymmetrical—M. M. Ghamian, S. Krishnasamy and A. N. Sherbourne, 49-56 (Feb.).
Cylinders, Strain Distribution Within Compressed Circular—M. Al-Chalabi, F. J. McCormick and C. L. Huang, 497-501 (Dec.).

Deformation and Failure of Spinal Materials—W. F. Hartman, 98-103 (March).
Deformation Studies in a Wide Temperature Range, Application of Moiré Grids for—P. Straka and J. T. Pindera, 214-216 (May).
Design of a Test Rig for Combined Loading of Circular Plates and Shallow Shells, The—H. M. Haydl and A. N. Sherbourne, 166-168 (April).
Determination of Fatigue-related Heat Emission in Composite Materials—K. L. Reifsnider and R. S. Williams, 479-485 (Dec.).
Determination of Mode I Stress-intensity Factors by Holographic Interferometry, The—Discussion by M. E. Fourney, 69-70 (Feb.).
Determination of Stress-intensity Factors from Photoelastic Data with Applications to Surface-flaw Problems—M. A. Schroedl, J. J. McGowan and C. W. Smith, 392-399 (Oct.).
Determination of the Optically Equivalent Model in Three-dimensional Photoelasticity—L. S. Srinath and A. V. S. S. S. R. Sarma, 118-122 (March.)
Development of Capacitance Strain Transducers for High-temperature and Biaxial Applications—L. M. Yeakley and U.S. Lindholm, 331-336 (August).
Diffraction-grating Strain-gage Technique For Measuring Strains and Rotations During Elastic Impact of Rods, Application of the—William F. Hartman, 509-512 (Dec.).
A Dynamic Investigation of Fiber-reinforced Viscoelastic Materials—H. J. Sutherland and H. H. Calvit, 304-310 (August).
Dynamic Yield-strength Determination at Elevated Temperatures After Nanosecond Pulse Heating—J. Lipkin, 177-183 (May).

Edge-effect Studies in Fiber-reinforced Laminates—D. W. Oplinger, B. S. Parker and F. P. Chiang, 347-354 (Sept.).
Effect of Loading Variables on the Acoustic Emissions of Fatigue-crack Growth—T. M. Morton, S. Smith and R. M. Harrington, 208-213 (May).
Effects of Impedance Mismatch on the Strength of Waves in Layered Solids—C. P. Burger and W. F. Riley, 129-137 (April).
Effects of Material and Stacking Sequence on Behavior of Composite Plates with Holes—I. M. Daniel, R. E. Rowlands and J. B. Whiteside, 1-9 (Jan.).
Elastic Constants of B-Al Composites by Ultrasonic Velocity Measurements—J. H. Gieske and R. E. Allred, 158-165 (April).
Elasto-static Response of Thick Shells, Experimental Determination of the—P. G. Glockner and F. G. Bercha, 297-303 (August).
An Electromagnetic, Plane Stress-wave Generator—Discussion by Herbert Becker, 424 (Oct.).
Epoxy Tubes, Biaxial Fracture Stresses for Filled—Richard E. Ely, 492-496 (Dec.).
Experimental Determination of the Elasto-static Response of Thick Shells—P. G. Glockner and F. G. Bercha, 297-303 (August).
An Experimental Study of the Parametric Excitation of a Tensioned Sheet with a Cracklike Opening—R. L. Carlson, 452-458 (Nov.).

SOCIETY FOR EXPERIMENTAL STRESS ANALYSIS. 21 BRIDGE SQUARE – P.O. BOX 277, SAUGATUCK STA., WESTPORT, CT 06880

Fatigue Behavior of Iron-carbon Alloys, The Role of Carbide Morphology on Low-cycle—R. V. Milligan, 190-195 (May).
Fatigue-crack Growth by Acoustic-emission Techniques, Continuous Monitoring of—D. O. Harris and H. L. Dunegan, 71-82 (Feb.).
Fatigue-crack Growth, Effect of Loading Variables on the Acoustic Emissions of—T. M. Morton, S. Smith and R. M. Harrington, 208-213 (May).
Fatigue Crack, Photoelastic Analysis of the Stress Field Surrounding a—A. Berkovits, A. A. Betser and A. Assa, 64-68 (Feb.).
Fatigue-related Heat Emission in Composite Materials, Determination of—K. L. Reifsnider and R. S. Williams, 479-485 (Dec.).
Fatigue Test Rig, Multi-axial Low-cycle—S. J. Leshenski, 251-256 (June).
Fatigue-testing Machine for Combined Bending and Torsion, A—G. S. A. Shawki and A. A. Mashhour, 196-201 (May).
Fatigue, The Influence of Residual Stress in Nickel and Chromium on—H. J. Noble and E. C. Reed, 463-467 (Nov.).
Forced Vibrations of Multi-component Compliant Tanks and Feedlines—H. W. Smith and L. Burmeister, 244-248 (June).
Fracture Mechanics, Ultrasonic Surface-wave Detection Techniques in—C. L. Ho, H. L. Marcus and O. Buck, 42-48 (Jan.).
Fracture Stresses for Filled Epoxy Tubes, Biaxial—Richard E. Ely, 492-496 (Dec.).
Further Experimental Studies on Buckling of Integrally Ring-stiffened Cylindrical Shells Under Axial Compression—T. Weller and J. Singer, 267-273 (July).

Gage, in Nonlinear Viscoelastic Materials, The Use of a High-modulus-inclusion—H. J. Buswell, D. R. Moore, and A. Owens, 274-280 (July).

Heating, Dynamic Yield-strength Determination at Elevated Temperatures After Nanosecond Pulse—J. Lipkin, 177-184 (May).
Holographic Interferometry Applied to the Solution of a Shell Problem—C. A. Sciammarella and T. Y. Chang, 217-224 (June).
Holographic Interferometry, The Determination of Mode I Stress-intensity Factors by—Discussion by M. E. Fourney, 69-70 (Feb.).
Holographic Multiplexing to Record Separate Isopachic- and Isochromatic-fringe Patterns, the Application of—A. Assa and A. A. Betser, 502-504 (Dec.).
Holographic Vibration Study of a Rotating Propeller Blade—J. P. Sikora and F. T. Mendenhall, Jr., 230-232 (June).
Holography, A Technique for Reducing the Fringe Frequency in Large-displacement—V. K. Der, D. C. Holoway and W. L. Fourney, 286-289 (July).

Impact, Spallation in Cylinder-Plate—J. Mescall and R. Papirno, 257-266 (July).
Impedance Mismatch on the Strength of Waves in Layered Solids—C. P. Burger and W. F. Riley, 129-137 (April).
The Increase in Strain-gage Measurement Reliability Under Extreme Conditions—M. Daichik, A. Polyakov and A. Vasiliev, 468-472 (Nov.).
The Influence of Residual Stress in Nickel and Chromium on Fatigue—H. J. Noble and E. C. Reed, 463-467 (Nov.).
Inelastic Deformations of Mild-steel Beams Under Symmetrical and Unsymmetrical Cyclic Bending—M. M. Ghamian, S. Krishnasamy and A. N. Sherbourne, 49-56 (Feb.).
Instrumentation for Use in Prestressed-concrete Reactor Pressure Vessels—N. Czaika, N. Mayer, C. Amberg and G. Magiera, 82-88 (Feb.).
Instrumentation Improvements for Scattered-light Photoelasticity—D. G. Berghaus, R. W. Aderholt, J. P. Buban and D. R. Womack, 505-506 (Dec.).
Instrumented Tensile-impact Tests of Bone—S. Saha and W. C. Hayes, 473-478 (Dec.).
Interferometric Device, Strain-ratio Measurements by an—D. McCammond and J. Motycka, 225-229 (June).
Interferometry Applied to the Solution of a Shell Problem, Holographic—C. A. Sciammarella and T. Y. Chang, 217-224 (June).
Interferometry, Measurement of Slopes of Structural Deflections by Speckle-shearing—Y. Y. Hung and C. E. Taylor, 281-285 (July).
Interferometry, The Determination of Mode I Stress-intensity Factors by Holographic—Discussion by M. E. Fourney, 69-70 (Feb.).
Isochoric Deformation During the Passage of Tensile Waves, A Study of One Dimensionality and—A. S. Khan, 57-63 (Feb.).
Isochromatic/Isopachic-fringe Visibility in Photoelasticity, Variable—J. D. Hovanesian, 233-237 (June).
Isopachic- and Isochromatic-fringe, The Application of Holographic Multiplexing to Record Separate—A. Assa and A. A. Betser, 502-504 (Dec.).
Isochromatic-fringe, The Application of Holographic Multiplexing to Record Separate Isopachic- and—A. Assa and A. A. Betser, 502-504 (Dec.).
Isopachic-fringe Visibility in Photoelasticity, Variable Isochromatic/ J. D. Hovanesian, 233-237 (June).

Kemano Revisited—Given A. Brewer, 425-432 (Oct.).

Large-deformation Measurements by Real-time Holographic Interferometry—T. R. Hsu, 408-411 (Oct.).
Light, Method for Production of Uniform-intensity Field of—N. K. Das Talukder, 204-205 (May).

Machining Unreinforced Polymers with High-velocity Water Jets—U. H. Mohaupt and D. J. Burns, 152-157 (April).
Macroscopic Static and Dynamic Mechanical Properties of Yule Marble—S. P. Howe, W. Goldsmith and J. L. Sackman, 337-346 (Sept.).
Measuring Static Strains at High Temperatures—B. E. Noltingk, 420-423 (Oct.).
Measurement of Slopes of Structural Deflections by Speckle-shearing Interferometry—Y. Y. Hung and C. E. Taylor, 281-285 (July).
Measurement of Surface Displacement Normal to the Line of Sight—Donald E. Duffy, 378-384 (Sept.).
Measurement of Surface Strain Rates in Glaciers Using Embedded Wire Strain Gages—G. Warner and G. Cloud, 24-28 (Jan.).
Mechanical and Optical Characterization of an Anelastic Polymer at Large Strain Rates and Large Strains—K. W. Chase and W. Goldsmith, 10-18 (Jan.).
Metal Formability with Coupon and Circular Specimens, Test for Sheet—H. M. Shang and T. C. Hsü, 104-110 (March).
Method for Determining the Buckling Strength of Concrete Panels, A—S. E. Swartz, V. H. Rosebraugh and S. A. Rogacki, 138-144 (April).
Method for Production of Uniform-intensity Field of Light—N. K. Das Talukder, 204-205 (May).
A Method to Shift Moiré Fringes Using Gap Effect—Discussion by A. Luxmoore, 507-508 (Dec.).
Moiré Fringes Using Gap Effect, A Method to Shift—Discussion by A. Luxmoore, 507-508 (Dec.).
Moiré Grids for Deformation Studies in a Wide Temperature Range, Application of—P. Straka and J. T. Pindera, 214-216 (May).
Moiré Methods, A New Optical System for—F. P. Chiang and G. Jaisingh, 459-462 (Nov.).
Moiré Methods, Strain Analysis of Composites by—Discussions by V. J. Parks and A. J. Durelli; and F. P. Chiang, D. Oplinger, B. Parker and J. Slepetz, 206-207 (May).
Moiré Techniques for Measuring Strains During Welding—L. Johnson, 145-151 (April).
Multi-axial Low-cycle-fatigue Test Rig—S. J. Leshenski, 251-256 (June).

New Automated Polariscope System—S. Redner, 486-491 (Dec.).
New Method To Increase the Sensitivity of Photoelasticity, A—F. P. Chiang and R. P. Khetan, 29-32 (Jan.).
A New Nondestructive Method for Three-dimensional Photoelasticity—L. S. Srinath and S. L. Bhave, 367-372 (Sept.).
A New Optical System for Moiré Methods—F. P. Chiang and G. Jaisingh, 459-462 (Nov.).

On Stress Concentration in Rectangular Plates Having Rectangular Inserts—S. Mirza and K. Ansari, 412-416 (Oct.).
On the Effect of Quarter-wave-plate Errors in Stress-Holo-Interferometry—J. Cernosek and S. McDonald, 403-407 (Oct.).
On the Mixing of Photoelastic Immersion Fluids—O. Smolik and D. G. Bellow, 400-402 (Oct.).
Optical Analysis of an Explosive-loading Function, Close-field—J. B. Ligon and W. F. Riley, 184-189 (May).
Optical Calibration of Photoviscoelastic Materials on a Microsecond Time Scale—R. L. Peeters and R. R. Parmerter, 445-451 (Nov.).
Optical Characterization of an Anelastic Polymer at Large Strain Rates and Large Strains, Mechanical and—K. W. Chase and W. Goldsmith, 10-18 (Jan.).
Optical System for Moiré Methods, A New—F. P. Chiang and G. Jaisingh, 459-462 (Nov.).
Optical Techniques to Measure Strain, Two New—C. A. Sciammarella and H. Nyuko, 311-316 (August).

Photoelastic Analysis of the Stress Field Surrounding a Fatigue Crack—A. Berkovits, A. A. Betser and A. Assa, 64-68 (Feb.).
Photoelasticity, A New Method To Increase the Sensitivity of—F. P. Chiang and R. P. Khetan, 29-32 (Jan.).
Photoelasticity, A Scattered-light Method in—Jørgen F. Gross-Petersen, 317-322 (August).
Photoelasticity, A Simple Way to Make Plane Waves for Dynamic—D. Williams and D. Smith, 19N-20N (June).
Photoelasticity, Instrumentation Improvements for Scattered-light—D. G. Berghaus, R. W. Aderholt, J. P. Buban and D. R. Womack, 505-506 (Dec.).
Photoelasticity, Variable Isochromatic/Isopachic-fringe Visibility in—J. D. Hovanesian, 233-237 (June).
Photoelasticity with Additional Physical Fields and Optically Active Models—H. K. Aben, S. J. Idnurm, E. I. Klabunovskii and M. M. Uffert, 361-366 (Sept.).
Photomechanics, Wave Motion in Anisotropic Media by Dynamic—R. E. Rowlands, I. M. Daniel and R. Prabhakaran, 433-439 (Nov.).
Photoviscoelastic Materials on a Microsecond Time Scale—R. L. Peeters and R. R. Parmerter, 445-451 (Nov.).
Plates with Holes, Effects of Material and Stacking Sequence on Behavior of Composite—I. M. Daniel, R. E. Rowlands and J. B. Whiteside, 1-9 (Jan.).
Polariscope System, New Automated—S. Redner, 486-491 (Dec.).
Polymers with High-velocity Water Jets, Machining Unreinforced—U. H. Mohaupt and D. J. Burns, 152-157 (April).
Portevin-Le Chatelier Effect, Acoustic Emission and the—W. F. Hartman, 19-23 (Jan.).
Pressure Vessels, Instrumentation for Use in Prestressed-concrete Reactor—N. Czaika, N. Mayer, C. Amberg and G. Magiera, 82-88 (Feb.).
Propeller Blade, Holographic Vibration Study of a Rotating—J. P. Sikora and F. T. Mendenhall, Jr., 230-232 (June).

Reusable Biaxial Strain Transducer, A—T. F. Leahy, 111-117 (March).
Role of Carbide Morphology on Low-cycle-fatigue Behavior of Iron-carbon Alloys, The—R. V. Milligan, 190-195 (May).

Scattered-light Flow-Optic Relations Adaptable to Three-dimensional Flow Birefringence—W. J. McAfee and H. Pih, 385-391 (Sept.).
A Scattered-light Method in Photoelasticity—Jørgen F. Gross-Petersen, 317-322 (August).
Scattered-light Photoelasticity, Instrumentation Improvements for—D. G. Berghaus, R. W. Aderholt, J. P. Buban and D. R. Womack, 505-506 (Dec.).
Shear Buckling of Advanced Composite Curved Panels—D. J. Wilkins and F. Olson, 326-330 (August).
Shear Joint, Adhesive Fracture of a Lap—K. L. DeVries, M. L. Williams and M. D. Chang, 89-97 (March).
Shell Problem, Holographic Interferometry Applied to the Solution of a—C. A. Sciammarella and T. Y. Chang, 217-224 (June).
Shells, Experimental Determination of the Elasto-static Response of Thick—P. G. Glockner and F. G. Bercha, 297-303 (August).
Shells, The Design of a Test Rig for Combined Loading of Circular Plates and Shallow—H. M. Haydl and A. N. Sherbourne, 166-168 (April).
Shells, Ultimate Tests of Thick—F. G. Bercha and P. G. Glockner, 290-296 (July).
Shells, Under Axial Compression, Further Experimental Studies on Buckling of Integrally Ring-stiffened Cylindrical—T. Weller and J. Singer, 267-273 (July).
A Short-gage-length Optical Gage for Small Strain—William N. Sharpe, Jr., 373-377 (Sept.).
Simple Way To Make Plane Waves for Dynamic Photoelasticity, A—D. Williams and D. Smith, 19N-20N (June).
Spallation in Cylinder-Plate Impact—J. Mescall and R. Papirno, 257-266 (July).
Speckle-shearing Interferometry, Measurement of Slopes of Structural Deflections by—Y. Y. Hung and C. E. Taylor, 281-285 (July).
Spinal Materials, Deformation and Failure of—W. F. Hartman, 98-103 (March).
Strain Analysis of Composites by Moiré Methods—Discussions by V. J. Parks and A. J. Durelli; and F. P. Chiang, D. Oplinger, B. Parker and J. Slepetz, 206-207 (May).
Strain Distribution Within Compressed Circular Cylinders—M. Al-Chalabi, F. J. McCormick and C. L. Huang, 497-501 (Dec.).
Strain Gages, Measurement of Surface Strain Rates in Glaciers Using Embedded Wire—G. Warner and G. Cloud, 24-28 (Jan.).
Strain, Two New Optical Techniques to Measure—C. A. Sciammarella and H. Nyuko, 311-316 (August).
Strain-gage Measurement Reliability Under Extreme Conditions, The Increase in—M. Daichik, A. Polyakov and A. Vasiliev, 468-472 (Nov.).
Strain-gage Technique for Measuring Strains and Rotations During Elastic Impacts of Rods, Application of the Diffraction-grating—William F. Hartman, 509-512 (Dec.).
Strain-Optic Law for a Certain Class of Birefringent Composites—R. B. Pipes and J. L. Rose, 355-360 (Sept.).
Strain-ratio Measurements by an Interferometric Device—D. McCammond and J. Motycka, 225-229 (June).
Strains During Welding, Moiré Techniques for Measuring—L. Johnson, 145-151 (April).
Strains, The Application of Birefringent Coatings to Metal Surfaces Which Are to Undergo Large Plastic—C. Adams and J. B. Beese, 202-203 (May).
Stress Field Surrounding a Fatigue Crack, Photoelastic Analysis of the—A. Berkovits, A. A. Betser and A. Assa, 64-68 (Feb.).
Stress-intensity Factors by Holographic Interferometry, The Determination of Mode I —Discussion by M. E. Fourney, 69-70 (Feb.).

Study of One Dimensionality and Isochoric Deformation During the Passage of Tensile Waves, A—A. S. Khan, 57-63 (Feb.).

A Technique for Generating Shear Waves in Cylindrical Shells Under Radial Impact—A. Blum, R. W. Mortimer and J. L. Rose, 417-419 (Oct.).
A Technique for Reducing the Fringe Frequency in Large-displacement Holography—V. K. Der, D. C. Holloway and W. L. Fourney, 286-289 (July).
Test for Sheet-metal Formability with Coupon and Circular Specimens—H. M. Shang and T. C. Hsü, 104-110 (March).
Towards the Achromatic Quarterwave Plate—Discussion by H. K. Aben, 249-250 (June).
Torsion, A Fatigue-testing Machine for Combined Bending and—G. S. A. Shawki and A. A. Mashhour, 196-201 (May).
Transducer, A Reusable Biaxial Strain—T. F. Leahy, 111-117 (March).
Two New Optical Techniques to Measure Strain—C. A. Sciammarella and H. Nyuko, 311-316 (August).

Ultimate Tests of Thick Shells—F. G. Bercha and P. G. Glockner, 290-296 (July).
Ultrasonic Surface-wave Detection Techniques in Fracture Mechanics—C. L. Ho, H. L. Marcus and O. Buck, 42-48 (Jan.).
Ultrasonic Velocity Measurements, Elastic Constants of B-Al Composites by—J. H. Gieske and R. E. Allred, 158-165 (April).
Ultrasonic Waves for Experimental Stress Analysis, Acoustical Birefringence and the Use of—N. N. Hsu, 169-176 (May).
The Use of a High-modulus-inclusion Gage in Nonlinear Viscoelastic Materials—H. J. Buswell, D. R. Moore, and A. Owens, 274-280 (July).

Variable Isochromatic/Isopachic-fringe Visibility in Photoelasticity—J. D. Hovanesian, 233-237 (June).
Vascular Walls, Biomechanical Study of the Constitutive Laws of—K. Hayashi, M. Sato and K. Moritake, 440-444 (Nov.).
Vibrating-wire Principle for the Measurement of Strain in Concrete, The Application of the—I. W. Hornby and B. E. Noltingk, 123-128 (March).
Vibration Study of a Rotating Propeller Blade, Holographic—J. P. Sikora and F. T. Mendenhall, Jr., 230-232 (June).
Vibrations of Multi-component Compliant Tanks and Feedlines, Forced—H. W. Smith and L. Burmeister, 244-248 (June).
Viscoelastic Materials, A Dynamic Investigation of Fiber-reinforced—H. J. Sutherland and H. H. Calvit, 304-310 (August).
Viscoelastic Materials, The Use of a High-modulus-inclusion Gage in Nonlinear—H. J. Buswell, D. R. Moore, and A. Owens, 274-280 (July).

Wave Motion in Anisotropic Media by Dynamic Photomechanics—R. W. Rowlands, I. M. Daniel and R. Prabhakaran, 433-439 (Nov.).
Waves, A Study of One Dimensionality and Isochoric Deformation During the Passage of Tensile—A. S. Khan, 57-63 (Feb.).
Waves for Dynamic Photoelasticity, A Simple Way to Make Plane—D. Williams and D. Smith, 19N-20N (June).
Waves in Layered Solids, Effects of Impedance Mismatch on the Strength of—C. P. Burger and W. F. Riley, 129-137 (April).
Welding, Moiré Techniques for Measuring Strains During—L. Johnson, 145-151 (April).
Yield-strength Determination at Elevated Temperatures After Nanosecond Pulse Heating, Dynamic—J. Lipkin, 177-184 (May).
